

Ultra small size adjustable output type high voltage power supply 2W to 2.6W high voltage DC-DC converter Bellnix® 0V-470V, 1000V, 1500V, 2000V MHV Series

The MHV series is the first high voltage product supply in the industry to use the latest SMT (surface mount technology) making the size 1/5 to 1/6 from the normal product, with an adjustable output voltage type mid-high voltage DC-DC converter. Output voltage can be controlled using an external voltage or external adjustable resistor. The MHV series has adopted a 5 side metallic shield, with farther low ripple and low noise.

■ Features

- PCB mounting type
- Output capacity 2W to 2.6W
- Over current protection
- Worlds smallest size device
- Low price
- UL certified product (UL File No. E305960)
- Adopted a 5 sided metallic shield case
- Remote ON/OFF control
- High reliability, long life
- Low ripple noise of 30mVp-p
- Adjustable voltage using an external voltage

■ Model name/Rating

Model name MHV series	Input voltage (Vdc)	Output voltage (Vdc) Note1	Output current (mA)	Load resistance (KΩ) min	Output capacity (W)	Input current (mA) typ	Ripple noise (mVp-p) typ	Case
MHV12-470S06P	10.8 to 13.2	0 to +470	0 to 5.6	83.3	2.6	390	40	M-11
MHV12-470S06N	10.8 to 13.2	0 to -470	0 to 5.6	83.3	2.6	390	40	M-11
MHV12-1.0K2000P	10.8 to 6.5	0 to +1000	0 to 2	500	2.0	290	30	M-11
MHV12-1.0K2000N	10.8 to 16.5	0 to -1000	0 to 2	500	2.0	290	30	M-11
MHV12-1.5K1300P	10.8 to 16.5	0 to +1500	0 to 1.3	1150	2.0	290	30	M-11
MHV12-1.5K1300N	10.8 to 16.5	0 to -1500	0 to 1.3	1150	2.0	290	30	M-11
MHV12-2.0K1000P	10.8 to 16.5	0 to +2000	0 to 1	2000	2.0	340	50	M-11
MHV12-2.0K1000N	10.8 to 16.5	0 to -2000	0 to 1	2000	2.0	340	50	M-11

■ Specifications

Input regulation	0.03% typ.(Regulation of input voltage range)
Load regulation	470V type : 0.08%typ, 1KV, 1.5KV, 2KV type : 0.03% typ(Load current 0 to 100%)
Temp regulation	±0.01%/°C typ.(Temp. regulation (-10°C to +50°C))
Over current protection	Hold back characteristic, auto restart circuit operates at 105% or more.
Output voltage accuracy	Below ±5%(Rated output, rated load, 470V type is Vcont=3.76V, 1KV, 1.5KV, 2KV type is Vcont=4V)
Output voltage control	External voltage is 0V to +4V, or an adjustable resistor with 5KΩ.
ON/OFF control	Available (Between 2pin-5pin :when open=ON, when short=OFF)
Usage temperature range	-10°C to +60°C(Derating required for temp.50°C or higher)
Storage temperature range	-25°C to +85°C
Usage humidity range	20% to 95%RH(Non condensing)
Input/output isolation	Non isolated type (2pin-6pin and case are internally connected .)
MTBF expected value	390,000 to 400,000H min.(From the Bellnix MTBF formula graph)

Note1: The output voltage can be controlled by impressing the Vcont voltage. Using an adjustable resistor or an external voltage,voltage should be impressed on the Vcont pin in order to control the output voltage. When Vcont voltage=0V the output voltage(residual output voltage) should be less than 0.5% of the max output voltage (at Input/Output rating).

■ Test circuit

■ Block diagram

Warning 1: The input-output ground line and case are internally connected.

Warning 2: Vref is 4V (When external VR=5KΩ)

Warning 3: The ON/OFF can be controlled with a transistor.

■ Model/Dimensions/Pin configuration (M-11 case)

Weight : 65g typ.
 Units : mm
 Tolerance unless otherwise specified ±0.5

- 1) Pins
 Material : Phosphorous bronze
 Treatment : Ni base Au coating
- 2) Case
 Material : Brass
 Treatment : Nickel coating

■ Standard usage instructions

The MHV series does not require any external parts, however when the impedance is high, for example: the distance between the power supply and converter long, the input line is thin, or the input side has a filter then connecting a capacitor C1 to the input side is recommended.
 Place the capacitor as close as possible near to the converter pin side, to lower the lead inductance.

■ ON/OFF control

By opening and closing the ON/OFF pin and -Vin pin the external voltage can be turned on and off.
 Between the ON/OFF pin (5) and -Vin pin (2)

- 1) Open will turn the output ON
- 2) Short(0 to 1.0V, 1mAmax) will turn the output OFF

The ON/OFF pin is internally pulled up to the +Vin, so be careful of the voltage from the switching element of the ON/OFF pin (photo couplers, transistors, etc)
 Keep the (5) open when not using the ON/OFF control.

The chattering to the ON/OFF pin will affect the output voltage, so choose one without any chattering. When the output is turned off by ON/OFF control, the residual output voltage should be within 0.5%.

Over current protection

The MHV series installed the over current protection to protect from the over load and load short. When the product status is in over load or load short mode, the output voltage will be decreased, and once the problem has been removed, the voltage will automatically recover.

MHV Series
Over current protection
characteristic

The over current protection has a hold back characteristic. The load should be set more than minimum resistor value which according to each series.

Recommended pattern

7—○ Diameter : $\phi 1.2$ 2—○ Diameter : $\phi 2.5$

1)The MHV series uses a metallic case. When mounting to a double-sided PCB, the wiring for the converter should be on the soldering side.

Also, this converter will generate high voltages so the creepage distance of pattern should be taken in when designing.

2)When mounting to a double-sided PCB, the land of the parts side of the high voltage output pin should be as small as possible.

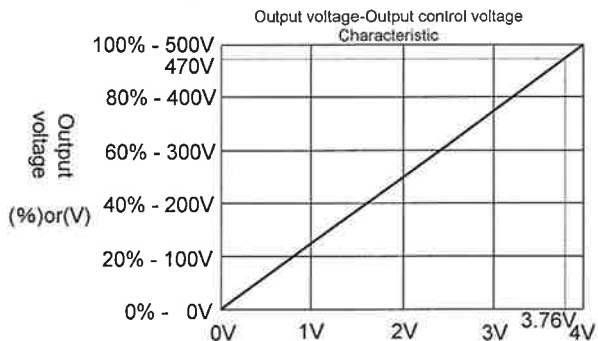

3)The case of MHV series should be connected to the -Vin and Vout (Com).

4)The metallic case does not need to be connecting to ground.

However, when using and ground with the metallic case, make the impedance lower as possible between the ground.

Output voltage setting/adjusting

The output voltage on the MHV series can be set and adjusted using an external voltage or external adjustable resistor.

- The above characteristics (Output voltage -VR resistor value characteristic) graph is an indication of the resistance value R1 and R2. Please check the output voltage by the adjustable resistor etc. and adjust at the actual using.
- Do not impress voltage higher than 4V+5% on the Vcont.
- Choose an adjustable resistor appliance with good temperature characteristics.
- When the resistance value is 5.0KΩ(R1=0Ω, R2=5KΩ), the max.voltage 4.0V will impress to Vcont pin. Therefore, the margin of error for the resistance value will largely affect the max output voltage, so use the resistance value as 5.0KΩ±5%.

■ Vref pin (standard voltage output)

When adjusting the output voltage with an adjustable resistor, this pin is used. Vref has a standard output voltage of 4V. In this case, use an external resistor with a resistance of 5KΩ.

The resistance(the margin of error) of external adjustable resistor will affect the setting value of Vref pin voltage, so use a resistor with an accuracy of 5KΩ±5%. The type of adjustable resistor will not matter, however one with a well temperature coefficient is recommended.

■ Recommended soldering conditions

Soldering conditions for each part is as follows:

- 1) Using a soldering iron 340 to 360°C 5 sec.
- 2) Using a soldering tub 230 to 260°C 10 sec.

■ Lowering the output noise even farther

The MHV series does not need any external parts, however to lower the output noise even farther, connect a capacitor C2 like the figure below.

When lowering the output noise even more, keep in mind the input/output wiring, creepage and area distance, while keeping the wiring as thin as possible and layout the C2 near the Load.

Point!

- 1) When choosing a capacitor that connects to the input, choose one which is a high frequency characteristic capacitor.
- 2) Common line should be designed thick and short to make same impedance small.
- 3) The capacitor which is connected to the output side should be able to withstand the pressure, and connect to the load side. At this time, the capacitor lead should be shortened. Also, when the load response time is a problem, please be aware of the time constant.

■ Temperature derating

When using the product where the ambient temp. is higher than 50°C, follow the derating graph below. The minimum load resistance is set for each series. When using higher than 50°C, set the load resistance high by following the below graph.

■ Prevention of inverse input connections

The converter may break if the polarities are reversed. If there is a possibility in which the connections may be reversed, connect a diode and fuse to the input pin like below.

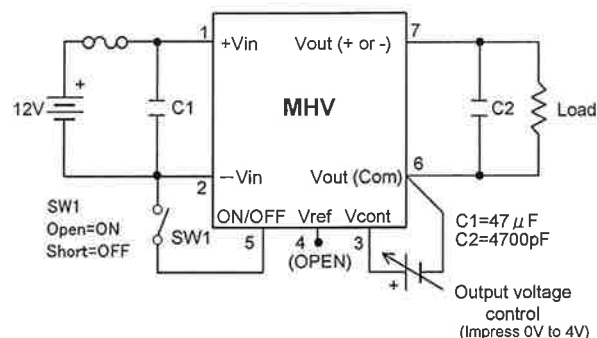

■ Safety standard

The MHV series has attained the UL/c-UL certification

- UL60950-1 1st Ed.
- c-UL(CSA22.2 No.60950-1-03 1st Ed.)

When using the MHV series as a Recognized certified product please mount an input fuse as shown below.

Choose a fuse from below:

- UL Listed products
- DC250V, Rated current 2A type

■ Guarantee

This product shall be guaranteed for year. During this period, if there should be any failure definitely due to our designing or manufacturing, we will repair or replace it with a new one at our expense. However, in any case that the product is modified and/or has made any interal remodlling by the buyer, the product can no longer be guaranteed. This guarantee shall cover only the MHV series.
